

Jobs at Geo++

Geo++ is the #1 developer of high accuracy GNSS software. Our technology is powering the most advanced GNSS services in the world, ranging from classic Network-RTK to state of the art SSR services like QZSS-CLAS. We are looking for support for our Team in Garbsen.

Software Engineer

We are searching for an experienced software developer for our backend modules. Our software relies on distributed computing of large amounts of data in real time using advanced mathematical filters.

Your tasks

- Software development in C/C++
- Design of automated tests
- Refactoring and updating of existing code
- Software design

Your profile

- Excellent knowledge in C/C++
- Experience in complex software projects
- Experience with high performance code
- Experience with time-critical multi-threaded software
- Experience with agile methodologies
